York® Champion® ULTRA Series SINGLE PACKAGE HEAT PUMP SYSTEMS

Efficient, All-Season Comfort in One Compact Package

BHP Model

Champion® ULTRA Series COMPACT SINGLE PACKAGE HEAT PUMP SYSTEMS

York® Champion® Heat Pumps Put Year-Round Comfort in a Single Package.

While most home comfort systems are made up of an outside air conditioning or heat pump unit and an indoor furnace or air handler, the Champion Single Package Heat Pump is an all-in-one unit designed to provide year-round comfort without taking up valuable space inside your home. You can count on this quiet, high-efficiency unit to keep energy and operating costs low in the hottest weather, or the coldest—for many years of comfort.

Energy Savings in Any Season.

Compared to older systems, a Champion Heat Pump can reduce your year-round energy use by up to 50%. York's exclusive coil design improves heat transfer and provides cooling efficiency ratings of up to 13 SEER! Our heat pumps also offer heating efficiencies up to 7.6 HSPF.² Plus, every Champion heat pump comes standard with a thermostatic expansion valve (TXV), to maximize efficiency and reduce energy waste—saving you money and meeting energy efficiency standards nationwide.

More Comfort.

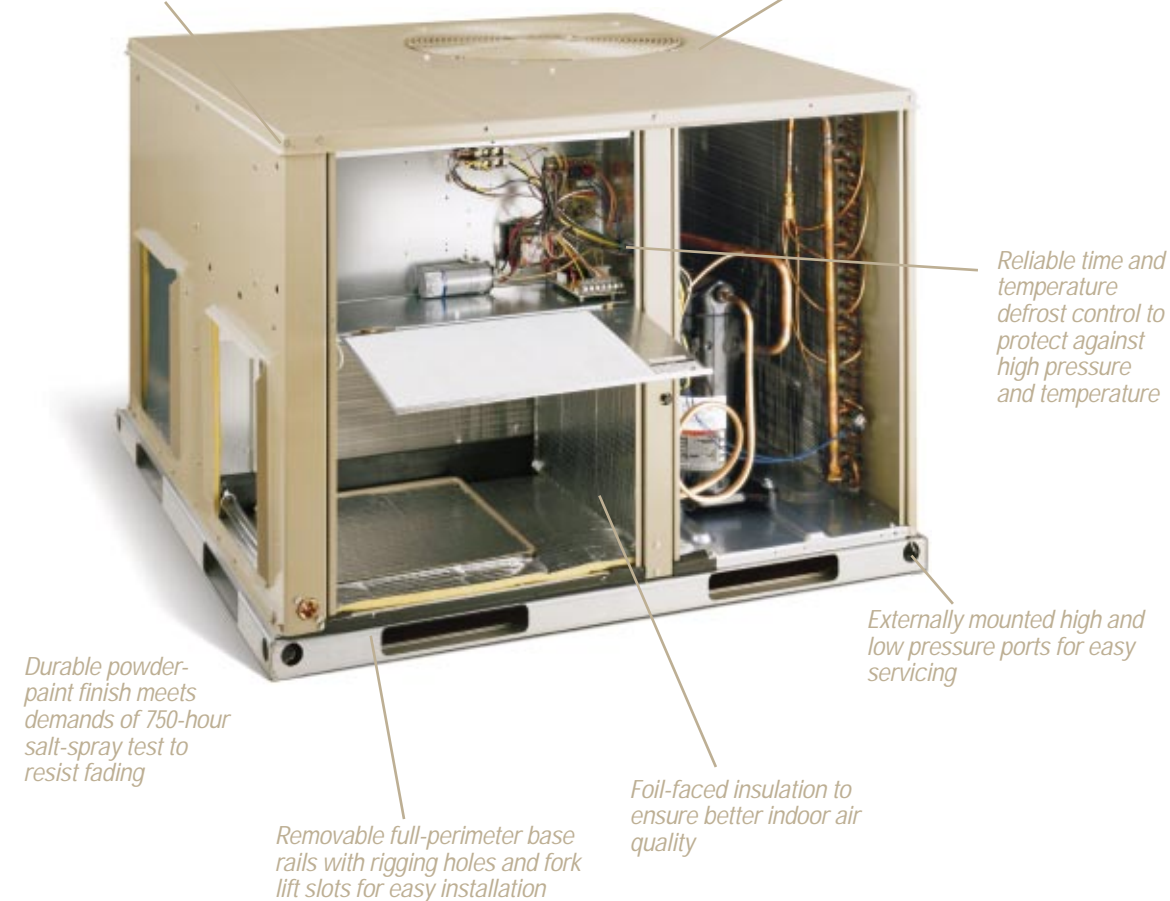

Your York Dealer can adjust fan speed and air flow to the level best suited to heating or cooling your home. So you'll have the right performance for maximum comfort any time of the year. The Champion System gives you the benefits of multi-speed fan adjustment motors, usually found only on the most expensive systems.

Quieter Comfort.

A Champion is designed to be quiet: Its rigid top panel and embossed base pan reduce vibration noise and the enhanced fin coils muffle operating sounds. Plus the compressor is mounted on rubber isolators for quiet operation. And since all major components are located outside your home, its operation is very quiet inside.

Top panel "drip edge," "water shed" design provides protection against corrosion

Top discharge carries noise up and away from the structure and landscaping

Durable powder-paint finish meets demands of 750-hour salt-spray test to resist fading

Removable full-perimeter base rails with rigging holes and fork lift slots for easy installation

Foil-faced insulation to ensure better indoor air quality

Externally mounted high and low pressure ports for easy servicing

Reliable time and temperature defrost control to protect against high pressure and temperature

The York Champion® Series: Warranted for Many Seasons of Satisfaction.

The York Champion unit is built for years of trouble-free service — a claim we're backing up with

some very nice warranties. All single phase 13 SEER Champion Heat Pumps are backed by a standard 10-year limited warranty on the compressor, and a 5-year limited warranty on all other parts. Three-phase

units come with a 5-year compressor and 1-year parts warranty.

Increase your benefits, and peace of mind, with additional parts-and-labor coverage from the YORKCare™ Comfort Plan. Several parts-and-labor warranty options are available, some with coverage lasting up to 10 years.

Ask your York Dealer for details.

Engineered for Durability.

Quality materials and manufacturing processes ensure that the system is built like a Champion. The compressor is specially protected from high operating temperatures and pressures. The coils are constructed from copper tubing and aluminum fins. Plus, they're protected from external impact by a tough, decorative grille. The permanently lubricated, long-life fan motors

need no annual maintenance. And the cabinet is made of heavy-duty galvanized steel with an extraordinary powder paint finish that resists corrosion and fading—even after the toughest salt-spray test in the industry.

¹ SEER = Seasonal Energy Efficiency Ratio. The higher the SEER rating number, the more energy efficient the unit. The government's established minimum rating for air conditioning is 10.

² HSPF = Heating Seasonal Performance Factor. The higher the HSPF rating, the more efficient a heat pump is at heating your home.
